

Health and DNA Requirements WALA BREEDERS

www.wala-labradoodles.org

Directors@walalabradoodles.org

Hips: Clearance from one of the following prior to mating of parent dogs:

1. OFA preliminary or final result of Excellent, Good, or Fair, over the age of four months, or BVA or FCI results that have been converted to OFA scoring.
2. PennHip 0.7 or better at any age over the age of four months.
3. Dr. Wallace, eVet Diagnostics report of Excellent, Good or Fair over the age of four months.

Elbows: Clearance from one of the following prior to mating of parent dogs:

1. OFA preliminary or final report of Normal/Clear, over the age of four months, or BVA or FCI results that have been converted to OFA scoring.
2. Dr. Wallace, eVet Diagnostics' report of Normal/Clear over the age of four months.

DNA Profile: This is a "fingerprint" of a dog's DNA, not a disease or trait test

1. Required for all parent dogs before a litter can be registered.
2. If a litter is dual sired, parentage must be verified for each offspring through a DNA Profile.
3. DNA Profiles are accepted from any OFA Approved Laboratory, or any lab accepted by other WALA recognized ALD clubs, including Van Haeringen, Biofocus, Pet Genetics, and Genomia.
4. Exemptions to DNA Profile:
 - Stud Dogs that are retired or no longer living
 - Non-WALA Studs (outside stud use)
 - All intact breeding dogs born before 1 January 2018

If parentage of any dog or puppy is questioned by a breeder, this breeder will be responsible for submitting the DNA of their dog to the same laboratory as that of the dog's parents' DNA Profiles.
